

Voca

Voca is speech-to-text on the machines you already own. Hold a hotkey, speak, and text is meant to land at your cursor. There is no Voca account and no hosted speech cloud to sign up for.

On-device processing is the default. After you download a speech-to-text model, audio stays on that computer or phone. VocaGateway is an optional self-hosted machine you run yourself. It is never on-device.

- VocaLinux is available now on X11 or Wayland.
- VocaMac is in beta on macOS 14+ Apple Silicon.
- VocaWin is a developer alpha. Unsigned tester builds live on GitHub. SmartScreen is expected.
- VocaPhone is an Android 13+ public beta. iOS 17+ is a source build.
- VocaGateway is early optional compute on a host you choose.

This catalog is for friends who want to try a product. Status follows vocahq.com PRODUCT.md. We do not claim 100% offline. A model download and an update check use the network.

vocahq.com

jatin@vocahq.com

Available now **v0.15.0**

VocaLinux

Dictation for Linux on X11 or Wayland. whisper.cpp, Whisper, or VOSK.
The public site is vocalinux.com. The product name is VocaLinux.

- Current release v0.15.0.
- On-device after the model is present.
- AGPL-3.0. Source at github.com/VocaHQ/vocalinux.

vocalinux.com

Beta macOS 14+

VocaMac

Dictation for Apple Silicon Macs. WhisperKit / Core ML. Install with Homebrew or a DMG.

- Public status is Beta, macOS 14+.
- On-device after the model is present.
- AGPL-3.0. Source at github.com/VocaHQ/vocamac.

vocamac.com

Developer alpha

VocaWin

Windows dictation in an unsigned tester build. NSIS and MSI are on GitHub Releases (v0.1.0-alpha.1). SmartScreen / unknown publisher is expected.

- Testers download, try, and file issues.
- This is not a signed Store build. Do not treat it as stable.
- AGPL-3.0-or-later. Source at github.com/VocaHQ/vocawin.

We do not ship fake screenshots. The site may still read Coming soon while tester builds exist.

vocawin.com / github.com/VocaHQ/vocawin/releases

VocaPhone

Phone dictation in the Voca family. Android is a public beta. iOS is a source build if you have a Mac, Xcode, a signing team, and a physical iPhone.

- Android 13+ public beta.
- iOS 17+ build from source. Guide at vocaphone.vocahq.com/iphone/.
- Gateway is optional. AGPL-3.0.

vocaphone.vocahq.com

Early optional host

VocaGateway

A self-hosted transcription host. Audio leaves the client for the machine you picked. That is not on-device and it is not a Voca cloud.

- Self-host on macOS or Linux, or Docker Compose on Linux amd64/arm64.
- Authenticated WebUI and QR pairing.
- AGPL-3.0. No product domain. github.com/VocaHQ/vocagateway.

Use this only when you want shared or larger compute. The default path is still on-device.

github.com/VocaHQ/vocagateway
